

Individual Reflection: Iteration 1

1. How has the coding gone for the first iteration? Did you complete everything you planned?

ANS:

Building the logic code posed some challenges for the team. While everything proceeded according to plan as outlined in our report, there is still an additional feature that needs to be incorporated into the signup page: **the reset function**

2. Are all team members productive?

Ans:

Regarding the project proposal, I've taken the initiative to fully prepare the proposal myself. After the initial submission, I requested Abdu to create a drawing, which he promptly completed. I anticipate seeing some adjustments in the upcoming weeks.

3. What changes/improvements will you make for the next week?

Ans:

- Add the reset function
- Enhance task management functionalities by adding editing, deletion, and priority setting features.
- Integrate reminder system to provide deadline notifications.
